

Ashleigh Magloire

Junior Backend & Full-Stack Engineer

github.com/Iris408
linkedin.com/in/ashleigh-magloire

Junior Backend & Full-Stack Engineer with hands-on experience building full-stack applications using Python, FastAPI, React, PostgreSQL, Docker, and REST APIs. Built backend systems, analytics dashboards, automation tools, and containerised applications focused on API integration, database architecture, and scalable system design.

Background in technical operations, troubleshooting, and data-driven environments within the automotive and ADAS industry at Tesla. Currently completing an MSc in Computer Science while continuing development in backend engineering, DevOps, and cloud technologies.

PROJECTS

Inventory Management System

React | TypeScript | FastAPI | PostgreSQL | SQLAlchemy | Docker | Tailwind CSS

- Designed and developed a full-stack inventory management dashboard with real-time CRUD functionality and analytics tracking.
- Built RESTful backend APIs using FastAPI and PostgreSQL with SQLAlchemy ORM and Dockerised backend services.
- Implemented filtering, sorting, product status tracking, analytics cards, and timestamp management through responsive React components.
- Integrated frontend and backend systems through real-time API communication and state management workflows.

Python System Health Monitor

Python | Linux | Docker | Slack API | psutil | Colorama | Git / GitHub

- Developed a Python-based Linux monitoring tool to track CPU, memory, disk usage and overall system performance..
- Added Slack alert integration, Docker support and improved terminal formatting.
- Implemented logging and monitoring workflows while working with Linux-based tooling and system monitoring concepts.
- Maintained project documentation and version control using GitHub and Markdown.

EXPERIENCE

Tesla, London – ADAS Engineer

FEB 2025 - Present

- Worked within high-volume technical environments supporting ADAS and data collection workflows.
- Performed system analysis, validation and data quality investigations across ADAS testing workflows.
- Supported ADAS data collection operations across multiple European locations, developing strong troubleshooting, adaptability skills in fast-paced technical environments.
- Collaborated across cross-functional teams to support system troubleshooting, operational efficiency and issue resolution.

Tesla, London – Operations Specialist

MAY 2023 - FEB 2025

- Supported operational workflows within a fast-paced technical environment focused on process efficiency, troubleshooting and continuous improvement.
- Troubleshoot internal systems, workflow issues, and operational processes across multiple technical areas.
- Coordinated across technical and non-technical teams to support operational processes, issue resolution, and internal workflow management.

London | Edinburgh, United Kingdom

| Open to Hybrid, Remote & International Relocation |

TECHNICAL SKILLS

Languages

Python | Typescript | SQL | REST APIs

Backend

FastAPI | REST APIs | SQLAlchemy ORM | PostgreSQL

Frontend

React | TypeScript | Tailwind CSS

Databases

PostgreSQL

DevOps & Tools

Docker | Docker Compose | Linux | Git/GitHub

EDUCATION

Heriot-Watt University

MSc Computer Science (*In Progress*)
Oct 2025 - Present

CERTIFICATIONS

IBM Devops & Software Engineering
(*In progress*)

LANGUAGES

English
Native

Japanese

Conversational Technical
