

Ashleigh Magloire

Junior Backend / Full-Stack Developer

I'm a backend-focused full-stack developer with experience building and deploying web applications, REST APIs, authenticated workflows and data-driven interfaces. I bring professional experience in ADAS operations, data validation and technical problem-solving at Tesla, supporting work across the UK and Europe.

I am currently completing an MSc in Computer Science while also developing production-style applications with Python, FastAPI, PostgreSQL, React, Next.js, TypeScript, Docker and CI/CD.

PROJECTS

PartsPilot – Automotive Inventory & Analytics Platform

Python | Next.js | TypeScript | FastAPI | PostgreSQL | SQLAlchemy | Docker | GitHub Actions

- Built a full-stack platform with authenticated inventory workflows, search, filtering, stock monitoring, supplier management and operational reporting.
- Developed REST APIs and a PostgreSQL data layer, containerised the application and added CI checks, CSV export and Power BI analytics.

Bloom - Accessible Routine & Focus Application

React | JavaScript | FastAPI | PostgreSQL | JWT | Docker | Tailwind CSS

- Built an accessibility-first application with authenticated accounts, persistent routines, focus sessions, progress tracking and configurable support controls.
- Designed a dual-mode architecture that separates guided demonstration data from authenticated user data while maintaining a consistent responsive experience.

AccessHub - Authentication & User Management Platform

React | TypeScript | FastAPI | PostgreSQL | SQLAlchemy | JWT | OAuth2

- Developed a connected full-stack authentication platform with protected routes, profile management, role-based interfaces and administrative user controls.
- Implemented PostgreSQL persistence, OAuth2-compatible authentication, automated tests, Docker support and continuous-integration workflows.

EXPERIENCE

Iris & Oak | Founder & Full-Stack Developer

JULY 2026 - PRESENT

- Built and launched a production Next.js and TypeScript website presenting services, pricing, selected work and structured customer journeys.
- Developed a four-step project-enquiry flow with validation, review and amendment functionality, privacy consent, server-side processing and transactional email delivery through Resend.
- Manage responsive and accessible interface development, deployment, maintenance, service design and prospective-client outreach.

Tesla Motors UK | London

ADAS Engineer

FEB 2025 - PRESENT

- Support ADAS data collection and validation workflows across Europe.
- Investigate data-quality, operational, and system issues in vehicle testing environments.
- Collaborate with engineering and operations teams to improve reliability and efficiency.

Operations & IT Specialist (later Delivery Advisor)

MAY 2023 - FEB 2025

- Managed high-volume operational workflows while consistently working to defined KPIs, service levels and delivery requirements.
- Provided first-line technical support, investigated system and process issues and coordinated resolutions across internal teams.
- Completed more than 8,000 customer vehicle handovers while delivering system walkthroughs and maintaining accurate operational records.

London | Edinburgh, United Kingdom
Open to International Relocation & Global
Team Environments

TECHNICAL SKILLS

Languages

Python | JavaScript | TypeScript | SQL

Backend

FastAPI | REST APIs | SQLAlchemy |
Pydantic \ JWT | OAuth2 | Alembic
Next.js Route Handlers | Resend

Frontend

React | Next.js | Astrp | Vite
Tailwind CSS | HTML5 | CSS
Responsive Design | Accessibility

Databases & Reporting

PostgreSQL | SQLite | Power BI

DevOps & Cloud

Docker | Docker Compose | GitHub Actions |
CI/CD
Linux | Git | GitHub | Render | Vercel
Prometheus | Grafana

Engineering Practices

API Design | Authentication & Authorisation
Database Migrations | Automated Testing
Structured Logging | Monitoring | Debugging

EDUCATION

Heriot-Watt University

MSc Computer Science
January 2026 – Present

CERTIFICATIONS

IBM Devops and Software Engineering Professional Certificate

In progress - Expected December 2026
